

## Intraday Power Trader - Quantitative and Market-Systems Background

Day-Ahead & Balancing | Short-Term Forecasting | Algorithmic Trading | Python & C#

### PROFILE

Power-market quantitative professional with an M.Sc. in Power Engineering and more than five years of experience across short-term electricity forecasting, imbalance modelling, trading-system development, market-data workflows and live application support. Built UK imbalance-price and Net Imbalance Volume models, day-ahead electricity forecasts and Python calibration tools, while supporting analysts and trading users in operational environments. Seeking to move from quantitative and trading-technology roles into direct intraday desk responsibility. Brings EU work rights, strong numerical judgement and disciplined communication of assumptions and risk; does not claim prior discretionary P&L ownership.

### RELEVANT TRADING STRENGTHS

|                         |                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------|
| <b>Short-term power</b> | Day-ahead forecasting; imbalance prices; Net Imbalance Volume; balancing-market drivers       |
| <b>Quantitative</b>     | Python; time series; regression; calibration; scenario analysis; large-data validation        |
| <b>Trading systems</b>  | Algorithmic execution components; market-data workflows; monitoring; live issue investigation |
| <b>Desk delivery</b>    | Analyst interfaces; PPA and strategy analysis; production support; cross-functional decisions |

### MOST RELEVANT EXPERIENCE

#### Quantitative Analysis Intern | Statkraft Markets, Dusseldorf

10/2018 - 03/2019

*UK balancing-market modelling and statistical validation*

- Developed UK imbalance-price and Net Imbalance Volume models using Python and regression techniques.
- Investigated the relationship between system imbalance, forecast behaviour and short-term price formation.
- Validated large time-series datasets, calculation logic and model assumptions; communicated results to algorithmic-trading and market-analysis specialists.

#### Quantitative Analyst for Market Models | Likron, Munich

11/2019 - 05/2021

*Algorithmic-trading software, market data and live-system support*

- Developed Python prototypes for model calibration and C# components for energy-trading and execution systems.
- Built SQL- and AWS-based market-data workflows and monitoring automation for operational reporting.
- Tested trading-software behaviour, investigated data issues and provided first-level support for live applications.

#### Quantitative Analyst - Energy Markets | GETEC Energie, Hannover

06/2021 - 10/2022

*Short-term forecasting, market fundamentals and strategy support*

- Developed Python short-term and day-ahead electricity-price forecasts and gas-price models for TTF and THE.
- Processed and validated time-series data, market fundamentals, scenarios and changing model assumptions.
- Supported PPA optimisation and trading-strategy analysis and built interfaces that made forecast outputs usable by analysts.

ADDITIONAL PROFESSIONAL EXPERIENCE

**Energy Market Consultant | Baringa Management, Dusseldorf** 11/2024 - 05/2026  
*Energy-trading technology, production readiness and delivery ownership*

- Supported an international energy-IT transformation across trading, business, development, testing and client teams.
- Owned defined workstreams and structured technical requirements, dependencies, risks, milestones and delivery decisions.
- Coordinated testing and defect resolution and helped execute a four-day production cutover and stabilisation.
- Translated complex operational issues into clear actions for engineers, market users and management stakeholders.

**Full Stack DevOps / C# Developer | Xapio, Munich** 11/2022 - 09/2024

*Backend services, relational data and controlled cloud delivery*

- Developed modular C#.NET and Blazor applications, backend services and PostgreSQL data workflows.
- Worked with Azure Functions, App Services, Git, CI/CD and xUnit testing in controlled deployment processes.
- Investigated production and data-quality issues, strengthening validation and operational reliability.

EDUCATION

**M.Sc. Management | TUM School of Management** 2022 - 2025  
*Focus: Entrepreneurship, business creation, technology assessment and product decisions*

**M.Sc. Power Engineering | Technical University of Munich** 2016 - 2019  
*Focus: Power systems, electricity markets, statistics, renewable integration and quantitative modelling*

**B.Sc. Mechanical Engineering | Islamic Azad University Mashhad** 2010 - 2014  
*Focus: Energy conversion, renewable energy, thermodynamics and engineering fundamentals*

SELECTED INDEPENDENT PROJECT

Built GridPulse Insights, a public-data platform for investigating German grid context and candidate connection locations. The work demonstrates independent product execution, energy-data integration and careful handling of uncertainty; it is not presented as direct trading experience.

TECHNICAL TOOLKIT

Python | C#.NET | SQL | PostgreSQL | AWS | Azure | Git | CI/CD | xUnit | Power BI | Excel/VBA | Time-series modelling | Regression | Forecasting | Data validation | Monitoring

ROLE ALIGNMENT

- Direct modelling experience in short-term electricity and balancing-market variables, including UK imbalance price and Net Imbalance Volume.
- Experience building and supporting algorithmic-trading and execution-system components in live operational environments.
- Comfort working from market fundamentals, data and model signals while challenging assumptions and investigating abnormal behaviour.
- Ready to relocate to Copenhagen; London or remote also considered. German and EU citizen with unrestricted EU work rights.
- Motivated to develop direct intraday execution, position management and accountable P&L ownership under an experienced desk lead.
